Homeowner Lawn Care Mowing

Proper mowing techniques are a huge factor in maintaining a healthy and beautiful lawn.

Keep mower blades sharp –

Sharpen mower blades frequently as dull blades will shred and cause greater moisture loss in the grass leaves.

Mow southern turf grasses at 4-5” –

(Including: St. Augustine, Zoysia, Centipede, and Bermuda)

Place mower on driveway and measure from the pavement to the bottom of the blade.

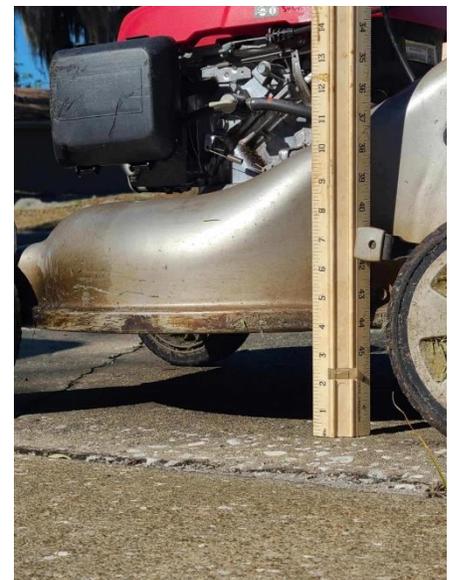

St. Augustine lawns cut lower than 3 inches when temperatures are above 90 degrees will likely die in areas and need replacement sod. Any insect controls that have been applied will break down faster due to higher ground temperatures and greater sun exposure.

During the seasons when your lawn does not require mowing, use a rake or leaf vacuum. Never lower your blades as a means to remove leaves.

Don't Cut More Than 1/3 Height at a Time –

Never remove more than 1/3 of the height of the grass at any one time. Doing so will stress the lawn. Weekly mowing during growing season will prevent this.
